

## ABSTRACT OF THE DISCLOSURE

An object management method and system capable of performing access control for objects appropriately and reducing workload of administrators is provided. Retrieval conditions of objects are defined, and access rights are set for each of the retrieval conditions, and access control is performed on the basis of the set access rights if an object to be accessed matches any of the retrieval conditions.

1. A method for managing objects, comprising:  
defining retrieval conditions for objects;  
setting access rights for each of the retrieval conditions;  
performing access control on the basis of the set access rights if an object to be accessed matches any of the retrieval conditions.
